COLLEGE OF COMPUTING AND MULTIMEDIA STUDIES

IS 119 – SYSTEM ANALYSIS AND DESIGN 2

1st Semester, AY 2026-2027 Pre-Final Defense Rubric

Project	**Cloud-Based Online Reservation and Records Management System for Zion Memorial Garden**		
Group No.:		**Course, Year & Section:**	BSIS – 3B
Date of Defense:		**Time:**	
Panel Member:		**Role:**	☐ Chair ☐ Member ☐ Adviser

Instructions: The Pre-Final Defense (Weeks 8–9) requires the group to present and demonstrate a 100% working core system based on the approved requirements and design specifications. Rate each criterion using the scale below, then compute the score: **Score = (Rating ÷ 4) × Weight.**

Rating Scale: 4 – Excellent | 3 – Very Satisfactory | 2 – Satisfactory | 1 – Needs Improvement | 0 – Not Demonstrated

Criteria	Weight	Excellent (4)	Very Satisfactory (3)	Satisfactory (2)	Needs Improvement (1)	Score
1. System Functionality (100% Working Core System)	**35%**	All core modules, features, and business processes work correctly and completely during the live demonstration, with no errors or crashes.	All core features work; only minor errors appear that do not stop any process.	Most core features work, but some processes are incomplete or produce errors.	Many core features are missing or fail during the demonstration.	
2. Requirements Compliance and Traceability	**15%**	Every approved functional and non-functional requirement is implemented and clearly traced to a feature (complete Requirements Traceability Matrix).	Almost all approved requirements are implemented and traceable; minor gaps.	Several approved requirements are missing or cannot be traced to features.	The system does not match the approved requirements and scope.	
3. System Design and Integration (Architecture, Process, Data Design, and Database Implementation)	**20%**	Architecture diagram, refined DFDs, ERD, and data dictionary are complete and consistent with the system; frontend, backend, and database are fully integrated, and CRUD works correctly with proper validation and constraints.	Design outputs are complete and mostly consistent; components are integrated with minor data or validation issues.	Design outputs are incomplete or partly inconsistent; integration is partial and some CRUD operations fail.	Design outputs are missing or do not match the system; components or the database are not integrated.	
4. User Interface and User Experience	**10%**	Interface is consistent, easy to navigate, and user-friendly; input and output designs follow the approved prototype and usability principles.	Interface is clear and usable, with minor inconsistencies in layout or navigation.	Interface is usable but confusing in parts; inputs/outputs are poorly designed.	Interface is difficult to use or incomplete.	
5. Implementation Planning and Project Management	**5%**	Updated project charter, Gantt chart, task assignments, and version-control records (e.g., Git/GitHub) show well-managed, on-schedule progress.	Planning documents are complete; minor delays or gaps in tracking.	Planning documents are incomplete or not updated.	No evidence of planning, task allocation, or progress monitoring.	
6. Initial System Documentation	**5%**	Initial documentation is complete, well-organized, accurate, and properly formatted.	Documentation is complete with minor errors in content or format.	Documentation is incomplete or has several errors.	Documentation is missing or largely incomplete.	
7. Presentation and Technical Defense	**10%**	Presentation is clear and organized; all members confidently explain design decisions and correctly answer panel questions.	Presentation is clear; most questions are answered correctly with minor hesitation.	Presentation lacks organization; several questions are answered incorrectly or incompletely.	Members cannot explain the system or answer panel questions.	

TOTAL	**100%**	**TOTAL SCORE (out of 100 points)**	

COLLEGE OF COMPUTING AND MULTIMEDIA STUDIES

IS 119 – SYSTEM ANALYSIS AND DESIGN 2

1st Semester, AY 2026-2027 Pre-Final Defense Rubric

Individual Technical Defense (Question and Answer)

Rate each member's answers to the panel's questions (4 – Excellent, 3 – Very Satisfactory, 2 – Satisfactory, 1 – Needs Improvement). This supports Criterion 7 and identifies individual contribution.

Member Name	Project Role	Rating (1–4)	Remarks
1. Binauhan, Elaine Joy	System analysis		
2. Dando, Danica	System analysis		
3. Delos Santos, Airchice Chaster	Project manager		
4. Jordas, James Frederick	Lead developer		
5.			

Panel Decision

☐ Passed ☐ Passed with Minor Revisions ☐ Passed with Major Revisions ☐ Re-defense Required
